

Canvas

In this challenge we got a webpage that contains a login containing username and password.

A login form titled "Canvas login" with a yellow header. It contains two input fields: "User Name :" and "Password :". Below the password field is a yellow "Login" button.

Canvas login

User Name :

Password :

Login

As we can see the main code is written in the login.js but it is obfuscated so we inserted the code in JavaScript Deobfuscator tool and noticed a suspicious line of code at the bottom:

```
var res = String.fromCharCode(72, 84, 66, 123, 87, 51, 76, 99, 48, 109, 51, 95, 55, 48, 95, 74, 52, 86, 52, 53, 67, 82, 49, 112, 55, 95, 100, 51, 48, 98, 70, 117, 53, 67, 52, 55, 49, 48, 78, 125, 10);
```

which is 'HTB{W3Lc0m3_70_J4V45CR1p7_d30bFu5C4710N}\n' the flag.
